

Bug exists since V9 FP10

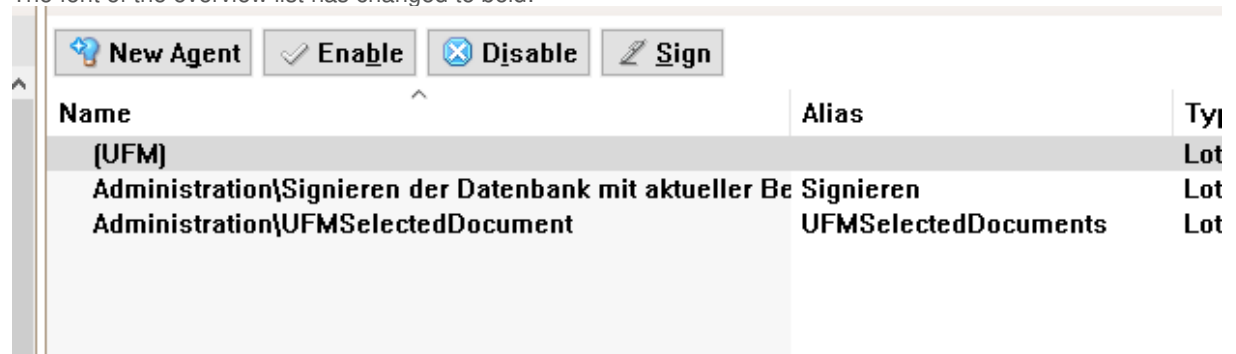

When working on LotusScript / JavaScript / Java-Libraries or XPages with Domino Designer every now and then I need to check some fields in a form or view columns to ensure that I get the correct reference to a content.

But after checking that, I am not able to open any of the first mentioned elements (like LotusScript / JavaScript / Java / XPages).

Steps to reproduce:

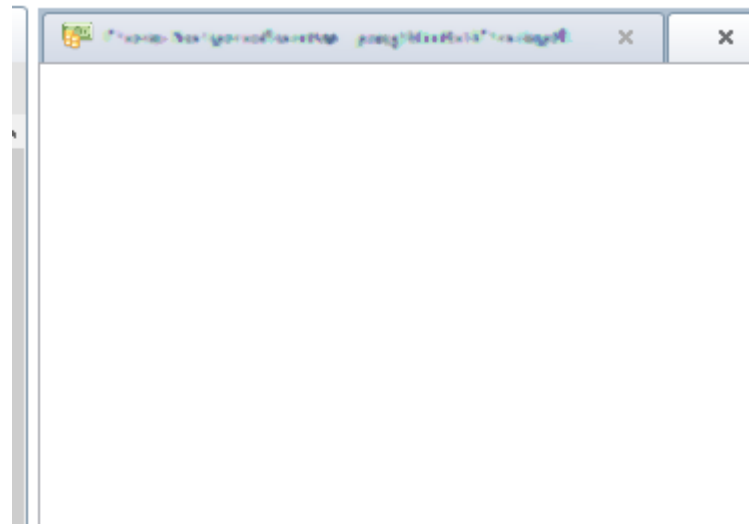

1. Open Domino Designer.
2. Open any application for editing.
3. Exemplary open any Form for editing.
You not even need to make any changes.
4. Close the form.
5. Now the buggy behaviour already started.
6. Change to Agents / Script-Libraries

The font of the overview list has changed to bold:

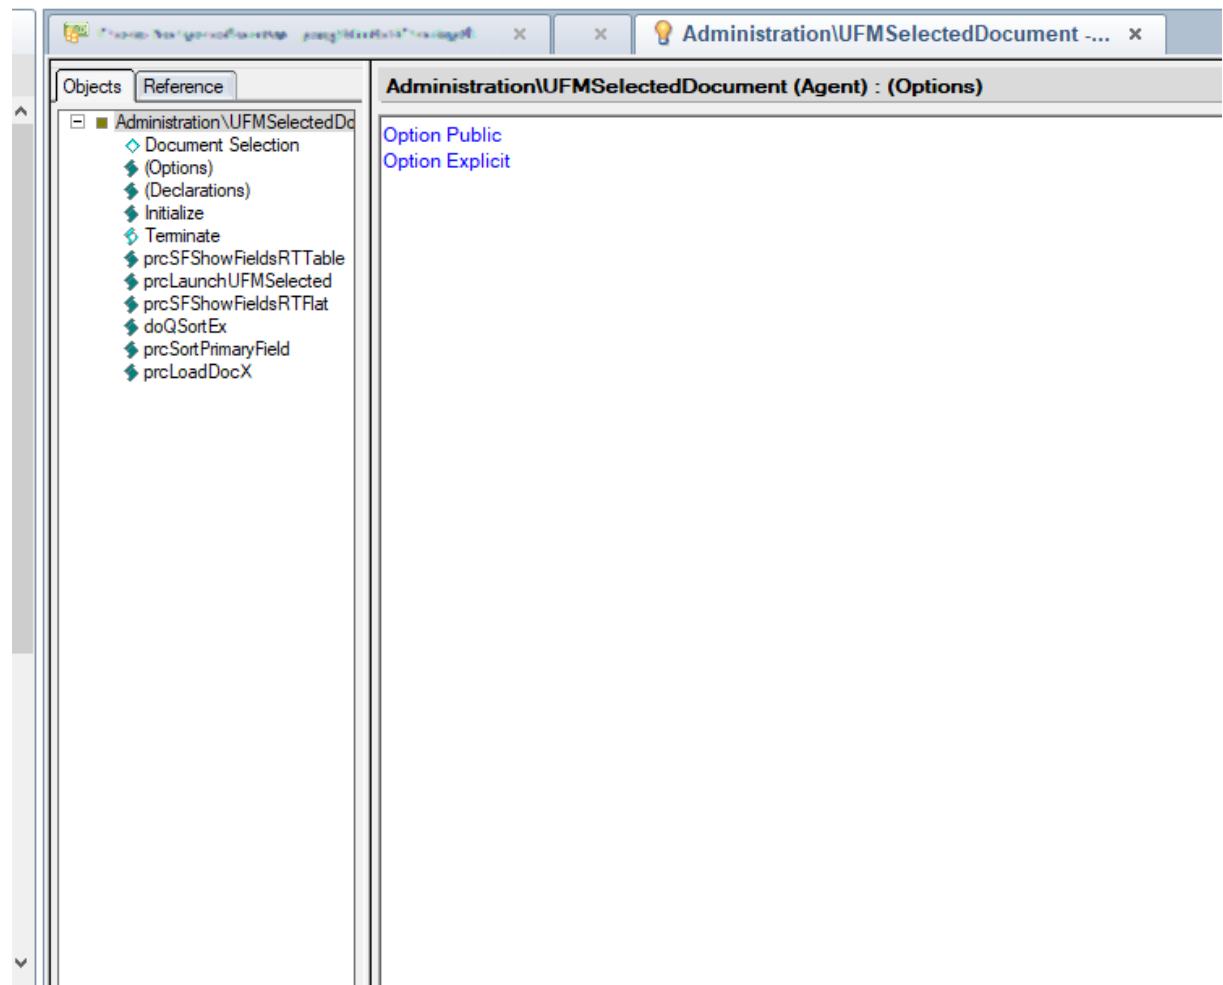

Name	Alias	Type
(UFM)		Lot
Administration\Signieren der Datenbank mit aktueller Be	Signieren	Lot
Administration\UFMSelectedDocument	UFMSelectedDocuments	Lot

7. Whatever Agent / Library you want to open for editing it ends up opening an empty tab:

8. In some cases an agent opens up with an empty tab and an additional tab containing the old IDE of the LotusScript-Editor (without Eclipse):

Finally there is no other way that killing ALL currently running clients (Notes, Designer, Administrator) and restart over again.
