

Notes 9.0.1 personal names.nsf is able to single out Company Contacts in By Company view > each Index.

All the company contacts are sorted in By Company > All when you want to see all the Company Contacts.

Notes 11.0.1 pernames.nsf does not have CompanyNameYomi field and it is not able to single out company contacts.

Only By Company > All show Company Contacts when company names is double bytes characters like Japanese.
